

ABSTRACT OF THE DISCLOSURE

A method, apparatus, and article of manufacture for displaying multiple window applets on a computer. The applet is written using the frame class and intercepts the methods by which an applet is started and started by the computer to
5 allow more than one applet, or more than one applet window, to be open at any given time. By intelligently intercepting the start and stop methods, and tracking which applets are open, multiple applets can be open at any given time within the system.
